Avi Glozman
Backend and Data Engineer

425.802.6718 — avi@avigloz.net
avigloz.net — github.com/avigloz

Education

University of Pittsburgh, Pittsburgh, PA
B.Sc. in Computer Science, **3.4 in-major, 3.2 overall** — *Aug. 2018 → Dec. 2020*
Dean's List: *Spring 2020, Fall 2020*

Skills

Programming languages: Python, Node.js, C, C++, C#, Java
Concepts: REST, WebSockets, Distributed Systems, Machine Learning, Operating Systems
Software: Git, Linux, Windows, SQL, NoSQL, Azure, AWS, LaTeX
Spoken languages: English (Native), Russian (Native), Spanish (Partial fluency), Hebrew (Basic), Mandarin (Very basic)

Professional Experience

University of Pittsburgh, SCI, Pittsburgh, PA

Machine Learning Researcher *(Capstone Project)* — *May 2020 → Sep. 2020*
- Trained a YOLOv3 object detection model using Darknet for detecting parts of the human spinal anatomy with up to 98% accuracy
- Developed a pipeline for converting CT scan data (DICOM format) into a 3D model, then into 2000+ augmented images for use as a synthetic dataset for model training and testing

Undergraduate Researcher, Learning Technologies Lab — *Nov. 2019 → Dec. 2020*
- Used Python and BeautifulSoup to efficiently scrape hundreds of faculty profiles to gain various insights, such as specific research interests, publication data, lab affiliations, etc.
- Compiled scraped data into easy-to-process datasets for use in a university-wide undergraduate research opportunity discovery platform

Uber, Pittsburgh, PA

Software Engineering Intern, Advanced Technologies Group (ATG), Simulation — *May 2019 → Aug. 2019*
- Created an ETL system using Python for moving self-driving car related data from DynamoDB to PostgreSQL, and solved complex data-syncing challenges
- Developed pruning algorithms in Python for preventing transfer of broken, invalid, and/or redundant data relating to self-driving car testing
- Contributed significantly to a web API written in Go for self-driving car data analysis in production

aspace, Seattle, WA

Lead Software Engineer, Backend — *May 2017 → Oct. 2017 (11th– 12th grade)*
- Designed MySQL and MongoDB databases for storing parking spot sensor data and user data, respectively
- Designed a RESTful API written in Node.js to support UX on Android and iOS apps, and for recieving sensor data
- Wrote an implementation of Dijkstra's algorithm using Node.js for navigation, relying on user location data and data from Mapbox's API
- Used Twilio's SMS API to integrate two-factor authentication into the backend

Please note that the present lack of software engineering internships is solely a consequence of my quick completion of my degree.

Noteworthy Technical Projects

Incompare *(personal, open source via GitHub)* — *2021 → Now*
- Using user-provided financial data, plots a parrallel coordinate graph with Plotly (using Python) to create comparative QoL insights from any set of pre-tax salaries
- Fetches income tax rates from SmartAsset.com's API using automatically detected, or user-provided location

Lightweight Messenger *(schoolwork)* — *2020*
- Used Node.js and Socket.io to design a backend for a lightweight messaging system prototype
- Implemented a RESTful API with Express.js for interacting with a PostgreSQL database for user accounts, contacts, message history, etc.

For more cool projects, don't hesitate to check out my GitHub!

Extracurriculars

Pitt Computer Science Club (CSC) Member and Mentor	*Sep. 2018 → Dec. 2020*
Private Online Mathematics and CS Tutor	*Oct. 2017 → Now*
Wikipedia Contributor (under username *Avigl*) — over 770k all-time article views	*June 2016 → Now*
